

# Built for a flexible workforce.

## Workplace

Workplace is the enterprise-grade file sync and share tool that easily enables secure, remote collaboration between business users for every file from every device.

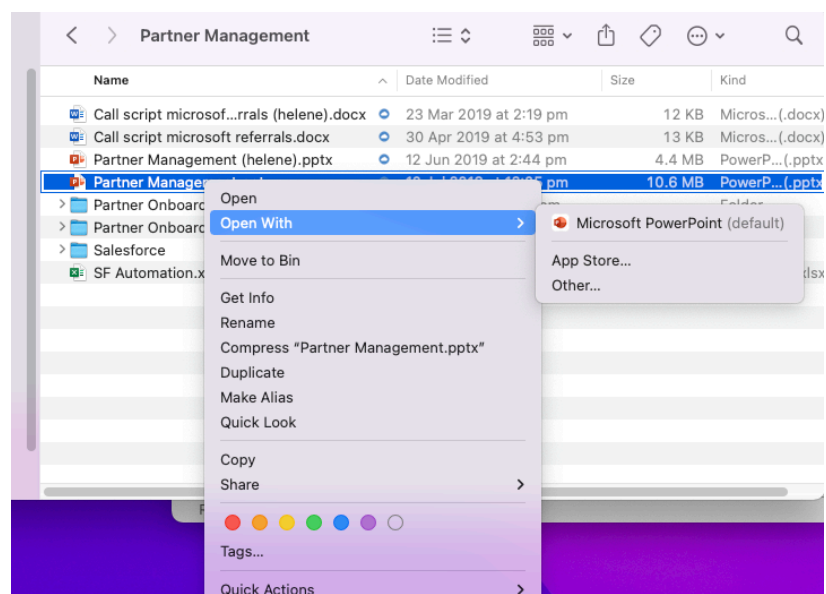

# Built for the demands of a flexible workforce, Workplace users benefit from unlimited file storage and native malware, ransomware and virus protection.

Businesses can be assured that their files are securely hosted across leading data centres in Sydney and Melbourne.

Workplace offers businesses all the advantages of a cloud file server, without impacting their unique ways of working.

With fully secured access across multiple devices and platforms, Workplace delivers a simple customer experience for business users wanting to tap into the benefits of cloud file storage.

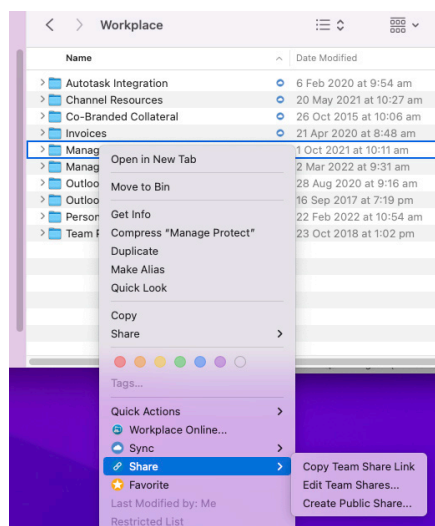

Familiar File Explorer interface.

# Key Features and Benefits

Secure access to files, wherever users choose to work.

Open documents or share with the team to collaborate.

## 1 A file server experience in the cloud

- » Nothing changes from a user experience. Although Workplace lives in the cloud, users simply see a drive in their File Explorer. This drive is easily accessible from mobile device via an iOS or Android app or a sophisticated web interface. Without having to worry about logging into sites or teams, files are at every users' fingertips.

## 2 File and data protection

- » Workplace is designed with security in mind. Native malware and ransomware detection and automated remediation are unique to Workplace. Combined with file-based virus protection and six months of file versioning, allowing Full file restoration from any point in time and delivering peace of mind.

## 3 Enabling productivity when mobile or working remotely

- » Online or offline access to documents, with integrated rendering for most file types, allows viewing of most documents.
- » Full integration with native Microsoft Office apps on mobile devices combines the functionality of Microsoft Office with the security and ease of Workplace.

## 4 Workplace hybrid deployment for local servers

- » Many customers wish to keep their local file servers or connect multiple file servers from different locations. Workplace Server edition allows the syncing of data directly into a network file server at the office while providing real-time access to these files in the same way, regardless of where users are working.
- » LAN attached endpoints and workstations sync to the onsite server (LANsync), thus easing pressure on ordinary internet bandwidth and providing a robust backup architecture.

## 5 Easy and secure remote access to files

- » All files are easily accessed on any device, from anywhere, without the need for virtual private networks (VPN). Files streamed on demand, or fully cached locally.

## 6 Sophisticated admin controls

- » Allow users the correct access with customisable group and user configurations and policy controls. Datto Workplace also integrates with Active Directory and Single Sign-On to automate on and offboarding.

The screenshot shows the Workplace interface. At the top, there's a navigation bar with tabs: Files, Devices, Team (with a red badge '2'), Configuration, and Reports. A search bar is on the right. Below this is another bar with: All, Favorites, Recently Viewed, Team Activity, Locked (with a red badge '3'), and Public Shares. The main area shows a breadcrumb path: Projects > Personal Documents > Manage Protect - Personal > Templates > Business. The 'Business' folder is selected, showing a file named 'Business Case.docx'. Above the file name are icons for adding, favoriting, sharing, and more. Below the file name are links for Comments, Team Shares, Public Shares, and Email. A filter box is present with the text 'Enter filename, user name or type...' and a checkbox for 'Show deleted'. A table below lists the file 'Business Case.docx' with columns: Name, Changed By (Me), Type (DOCX), Size (9 KB), and Modified Date (11/03/22 2:38 PM). A 'Copy Share Link' button is on the right.

Open documents in the app that created them, such as Microsoft Word.

Workplace provides full visibility of all projects, folders and files created by anyone.

#### 7 Full IT control and visibility

- » Workplace provides full visibility of all projects, folders and files created by anyone, as well as detailed reports and audit trails on users, groups, devices, projects and files.
- » Workplace gives IT full control of users, groups and devices; their permission policies; share, sync and public link permissions.
- » The Active Directory also allows the import and provision of internal users.

#### 8 Policies tailored to each business' unique needs

- » Audit records on all account activity including projects, groups, mobile access.
- » Policies to specify which groups and devices require approval, with exceptions, including Mobile Device Management (MDM).
- » Enterprise policies for managing password, MFA, session, IP address whitelisting, public links, remote access and mobile devices.

#### 9 Security and compliance

- » HIPAA and SOC 2 Compliance, 256-bit encryption, and 99.99% uptime keeps business data safe. A geo-redundant data centre infrastructure in the Australia means your data does not need to leave the region. All user data is protected with 256-bit AES encryption during transit and storage.

#### 10 Seamless collaboration

- » Workplace works across core business tools such as Microsoft 365 and G Suite so when file locations change, productivity doesn't.

#### 11 Solution is provisioned and managed by a certified Managed Service Provider of Manage Protect
