File Backup Service.

File Protection

File Protection is a simple-to-use solution designed to protect business files and documents from ever-present threats such as human error, hardware failure or stolen devices. Easily deployed, configured and centrally managed, File Protection automatically backs up critical business files to safeguard against lost or deleted documents.

File Protection is a cloud–based backup service giving businesses complete peace of mind.

Businesses can be assured that their files and documents are safeguarded against data loss.

File Protection automatically backs up critical business files and documents and saves them in a personalised portfolio.

File Protection offers peace of mind for businesses knowing that files and documents, in specified locations, are automatically backed up. File Protection always runs in service mode, which ensures that it's constantly backing up data, even on unattended devices.

Backed-up files have an unlimited retention period, as long as the file isn't removed from the backup.

Key Features and Benefits

1 Security testing and compliance with:
- » HIPAA and SOC2, 256 AES encryption in transit and at rest.

2 Centrally managed, full configuration
- » Offers a consistent and reliable backup of all devices, servers and desktop with support for Windows and Mac.

3 Fast and easy file restoration for lost or corrupted data
- » Offers risk insurance against data loss and potential cyber threats.

4 Root drive backup
- » Reduces administration while ensuring important folder locations are backed up.

5 Automated scheduled reports
- » Offers visibility into backup status and audit trail of activity.

6 Multiple versions for automated backups
- » Every time a file is backed up a version is created to capture changes between versions.
