Email Archive Service.

MParchive

MParchive is a business-grade email archive solution for small to medium businesses. Available for a fraction of the cost of traditional or enterprise archive solutions, it is implemented without the need for hardware, software installation or ongoing maintenance.

Every business email sent or received is securely archived, searchable and accessible.

With MParchive, individual users also have access to their own email archive so they can delete emails to keep mailboxes at a manageable size.

MParchive's global storage infrastructure is powered by best-of-breed technology. All business data is stored within Manage Protect's secure Australian data centres, ensuring Australian compliant storage.

The email archive solution provides:

» **Outlook Integration Add-In**

Using MParchive's Outlook Integration Add-in, individuals within a business can access every email they ever sent or received without leaving Microsoft Outlook. Optionally, they may also perform more complicated searches using a convenient web interface or the iOS/Android Apps.

» **Business Record-Keeping & Compliance**

While there is no standard rule relating to the period of time a business needs to keep its documents and records, it largely depends on the type of document which may be required for legislative reasons, industry regulations or preparedness for litigation. The fully compliant MParchive solution will ensure a business won't be caught out.

» **Advanced Search and Discovery Access**

The archive audit function allows administrators to grant internal or external parties secure access to all emails between specific dates in the archive, for a specific period. The access is fully audit logged and requires a second user to authenticate access. Email archive is also available through both iOS and Android mobile apps or a web browser.

Key Features and Benefits

A true representation of every inbound and outbound communication.

1 **Business users have convenient access to their archived emails**

» Through the Outlook Add-in, iOS and Android email archive apps or web browser.

2 **All archived emails remain in Australia**

» MParchive is fully compliant with data sovereignty requirements.

3 **Ease of setup**

» No hardware, software, installation or maintenance required.

4 **10 years unlimited storage of emails**

» Duration can be extended.

5 **A true business-grade and compliant email archival solution**

» For small to medium businesses.

» Not just 50GB worth of free storage from Microsoft.

6 **Enables organisations to focus on their core business**

» Rather than with infrastructure hassles.
